SYNOPSIS PRESENTATION

Web-Based Placement Management System

A web application that brings students, recruiters and placement administrators onto one centralized platform, built with the MERN stack

Submitted by **Tanisha & Swati**

Bachelor's of Computer Application | Session 2026–2027
Under the guidance of Ms. Chetha

Existing System

How placement is handled today

Literature survey

- Several placement systems already digitize college recruitment
- They provide separate modules for students, companies/recruiters and administrators
- Web-based workflow systems offer role-based access, student registration, eligibility filtering and application-status tracking
- They also use student profiles, company job postings, candidate applications and admin management
- Traditional methods still rely on documents, spreadsheets, emails and other disconnected tools

Limitations of the traditional system

- Excessive dependency on paperwork
- Difficulty in maintaining updated student records
- Manual checking of eligibility
- Difficulty in tracking applications
- Repeated communication between students and placement staff
- Higher possibility of data-entry errors
- Difficulty in generating placement reports
- Lack of a single centralized platform

Problem Statement

Managing placements manually is hard

1. **Student data**
   Maintaining large amounts of student information

2. **Company & jobs**
   Managing company and job information

3. **Applications**
   Tracking student applications

4. **Eligibility**
   Checking eligibility for different placement drives

5. **Records**
   Maintaining placement records

6. **Communication**
   Informing students about opportunities

7. **Reports**
   Generating and accessing placement information quickly

Hence the need for a centralized web-based system that makes placement management organized, accessible and efficient.

Proposed Solution

One centralized platform with three role-based modules

Student

- Register and log in
- Create and update profile
- Add academic information
- View available placement drives
- Check job requirements
- Apply for eligible opportunities
- Track application status
- View announcements

Company / Recruiter

- Register / log in
- Maintain company information
- Post job opportunities
- Specify eligibility requirements
- View applications
- Review candidate information
- Update application status

Administrator

- Manage student accounts
- Manage company accounts
- Manage placement drives
- View applications and announcements
- Monitor placement information
- Maintain system records
- Manage users and activities

WHY IT HELPS

Centralized information • Less paperwork • Faster access • Easier application tracking • Better student records • Improved communication • Role-based access • Easy record maintenance

BUILT WITH MERN

MongoDB • Express.js
React.js • Node.js
